Rosebank Tech Support Website

1. Introduction

Below is the list of improvements to the Rosebank Tech Support website. It includes the fixes that have been implemented in response to feedback about previous parts and new features introduced in Part 3. A comprehensive changelog can be found in the README.md file in the GitHub repository.

2. Improvements Made After Feedback

The problems below were found in the earlier versions of the pages and have been corrected.

Problem found	Pages	Improvements madea
The links for navigation did not work because there was a space in "about us.html" while "contact" lacked ".html".	All page	Fixed the links for about-us.html and contact.html, added home.html, and finally added enquiry.html such that all page's link to each other
Incorrect HTML formatting: nesting <header> tags, lack of closing </nav>, and <body> tag within the header section	All page	Instead, there is one main header with the logo and a closed navigation menu.
The pages lacked style and were not mobile-friendly.	All page	Charset and viewport meta tags have been added along with linking to one common stylesheet style.css which is responsive and mobile.
Image not available and no alt tag present	All page	Deleted the blank image and provided alternate text for each image.
A broken HTML markup where a video is wrapped in a paragraph and an image.	Home.html Index.html	Updated index.html to use proper video tag and fallback text and home.html to use normal image and paragraph.
Incorrect footer codes (&copy & #)	All page	Replaced with the correct © and • HTML symbols

3. Part 3 Improvements

Requirement	What was done	Files
Interactive elements	FAQ questions expand and collapse like an accordion, where we use <details> and <summary> tags together with a + and – symbol for expanding/collapsing. We have	FAQ.html, style.css

	a hover and focus effect on nav items, buttons, service blocks, and gallery images.	
Interactive map	A Leaflet map using the data from OpenStreetMap features Rosebank Tech Support marked on the map.	contact.html
Gallery with lightbox and DOM manipulation	JavaScript generates an overlay that covers the entire screen whenever a gallery picture is clicked. It displays the big picture with its caption and closes through the closing button, clicking outside the image, or pressing the Esc button.	gallery.html, script.js, style.css
Dynamic content and search	There is an option for live searching on the services page which will filter the cards based on what the visitor searches for.	services.html, script.js
Forms and validation	The enquiry form allows people to select a desired support option, insert their name and email, and explain the issue. All fields are checked using JavaScript, which shows errors, subsequent action, and estimated waiting time in case of confirmation. It says on the page that it is only for technical support. The contact form applies to HTML5 validation.	enquiry.html, contact.html, script.js
On-page SEO	Each page contains a distinctive title and meta description, headings, alt tags, file names, and links. They are optimized for mobile viewing as well.	All HTML pages
robots.txt and sitemap.xml	The robots.txt file indicates that the site is available for crawling, while the sitemap provides the link to the sitemap.xml. Sitemap.xml has eight pages.	robots.txt, sitemap.xml
Page speed	The images utilize WebP format, gallery and page images lazy load, the map images utilize preconnected hints, while the 1MB logo image was optimized down to 215KB.	All HTML pages, Images folder
Security	The website uses HTTPS through GitHub Pages; the forms are validated before they can be submitted, and personal information is not stored on the website.	Entire site

Branding and pictures	The final Rosebank Tech Support logo is seen on every page header, and every page contains an image. An introduction video was also added to the homepage.	All HTML pages, Images folder
Bug fix	Upon a successful enquiry, the form would still be visible on the page after the confirmation message. The CSS [hidden] attribute was added to ensure that the form gets hidden.	style.css
